22.   (Previously canceled)

Currently

23.   (~~Presently~~ amended)   An article of manufacture for providing a user with an application monitoring and disaster recovery management tool, the article of manufacture comprising:

a computer usable storage medium; and

processor instructions stored on ~~the~~ said computer usable storage medium for causing a computer to:

deploy a plurality of intelligent agents within a primary computing environment, said primary computing environment including a primary server executing an application, and wherein each of said plurality of intelligent agents monitors a metric related to said application;

monitor a plurality of states of said application, each of said plurality of states being rendered by one of said plurality of intelligent agents;

display to the user, via a graphical user interface, said plurality of states; and

perform a failure switch-over of said application from said primary computing environment to a secondary computing environment having a secondary server capable of executing said application in response to a single action input received from the user via said graphical user interface, wherein said single action is a button click by the user on said graphical user interface.

24.   (Previously presented)   The article of manufacture of claim 23, wherein said application is an electronic mail application, and further comprising:
